

MODEL	HARD	MEDIUM	SOFT	HYDRO
HA Concentration	20mg/ml	20mg/ml	20mg/ml	20mg/ml
Package	1 x 1ml	1 x 1ml	1 x 1ml	1 x 2ml
Cross-linking Rate	●●●●●	●●●●○	●●●○	●○●○
Micro Needle Size (Included)	27G 13mm	27G 13mm	30G 13mm	31G 13mm
Application	Nasolabial lines Nose / Cheek Chin / Fore-head Laugh lines Lip contouring	Cheek / Chin Fore-head / Nose Laugh lines Nasolabial lines Lip Contouring Gabella lines	Crow's feet Earlobe Perioral Wrinkles Gabella lines Forehead lines	Whole Face
Duration	1 year	1 year	1 year	2 months
Shelf Life	2.5 years	2.5 years	2.5 years	2.5 years

### Accessory

Natural-M (Multi Needle) is designed to combine with aquifill HYDRO to inject it into the dermis with easy and quick procedure. Especially, 9 Pin needle can be connected with the injectable device as well.

SIZE	Gauge	Length
5 pin (by hand)	31G, 32G, 33G, 34G	0.8mm, 1.0mm, 1.2mm, 1.5mm
9 pin (by device)	31G, 32G, 33G, 34G	0.8mm, 1.0mm, 1.2mm, 1.5mm

- Easy Molding
- Strong Viscosity
- Effective gel hardness

### Triple Staged Cross-linking

Microbead and its manufacturing process using Polysaccharide Polymer (Hyaluronic Acid) - Improving the limitations of cross-linking technology applied in conventional HA fillers, aquifill has been developed by the patented manufacturing of microbeads using triple staged Cross-Linking Technology to create a more stable molecular structure and higher cross-linking rate. It increases long lasting and the viscosity of our fillers.

### Safety & Removable

aquifill is absorbed in safety by human body without any harm, and both the raw material and its products are 100% Hyaluronic Acid without any modification. aquifill is strong against natural hyaluronidase inside human body, however, it can be perfectly removed by injecting hyaluronidase.

### Application

aquifill can be applied to a range of facial area.

aquifill  
FILL YOUR LIFE

### Introduction of HA filler

Hyaluronic acid is an essential part of the extracellular matrix of many tissues including the dermis and plays an important role in tissue growth, development, and wound healing. Hyaluronic acid is hygroscopic and absorbs water extensively, thus creating volume. Treatment with HA fillers is popular, as they are biocompatible.

### Product Features

- Easy molding
- Strong viscosity and cohesiveness
- Effective gel hardness

aquifill is designed to the three ideal mechanical properties of fillers. aquifill applies progressive HA technology to increase long-lasting effect, safety and removability. And aquifill shows extremely high hydrophilic capacity thanks to its stable molecular structure and it remains 100% HA, showing a new level of filler compared to the competitors. aquifill can be perfectly dissolved through effect of hyaluronidase.

### Viscosity

The patented technology can make a semi-solid gel of HA and aquifill has high cohesiveness and viscosity. The pseudocapsule is created as an implant when aquifill is injected and it is not easily dissolved by hyaluronidase of Human body.
